

Secure Shopping with Pro Audio Systems

When you shop with Pro Audio Systems, our secure server encrypts all of your personal information, including name, address and credit card information. We use Sagepay & Paypal which are industry leaders in secure internet transactions. Sagepay & Paypal are used by thousands of other UK businesses for transaction security.

Industry leading transaction security

All transaction information passed between our website and the Sagepay & Paypal Payment System is encrypted using 128-bit SSL certificates. No cardholder information is ever passed unencrypted and all messages from Sagepay & Paypal are signed using MD5 hashing to prevent tampering. You can be completely secure in the knowledge that nothing passed to Sagepay & Paypal can be examined, used or modified by any third parties attempting to gain access to sensitive information.

Internationally recognised encryption and data storage

Once on the Sagepay & Paypal system, all sensitive data is secured using the same internationally recognised 256-bit encryption standards used by, among others, the US Government. The encryption keys are held on state-of-the-art, tamper proof systems in the same family as those used to secure VeriSign's Global Root certificate, making them all but impossible to extract. The data they hold is extremely secure and they are regularly audited by the banks and banking authorities to ensure it remains so.

Private network links to banks

Sagepay & Paypal has multiple private links into the banking network that are completely separate from the Internet and which do not cross any publicly accessible networks. Any cardholder information sent to the banks and any authorisation message coming back is secure and cannot be tampered with.

Employee access

No individuals within our company or Sagepay & Paypal are able to decrypt transaction information or cardholder data. Their systems only allow access to our most senior staff and only in extenuating circumstances (such as investigations of Card Fraud by the Police). Your card information is secure even from their own employees because the systems never display the full card numbers, even on administration screens.
